

ABSTRACT

A method and system for displaying a series of images captured by a digital camera, which includes a user interface that includes a view finder. The method and system first stores each of the captured images in memory, and then displays a plurality of image cells in the view finder, wherein each of the image cells corresponds to one of the captured images. The method and system further provides at least one of the image cells with an image area for displaying the corresponding captured image, and further provides the at least one image cell with an icon area for displaying additional information regarding the corresponding captured image.
